Xerox® Workplace Cloud

Our easy-to-use, IT-friendly Xerox® Workplace Cloud frees you from security risks while offering convenience, usage insights and dashboard-based monitoring and control of your entire printer fleet.

Simple Setup, Cloud Administration

Xerox® Workplace Cloud is easy to set up and use, so it's the ideal choice for businesses or organisations with limited access to IT or looking to consolidate IT resources. And because it's cloud based, it works across multiple networks, giving you complete control of every printer at every location.

AUTHENTICATION, ACCESS CONTROL AND RULES

Flexible authentication methods allow users convenient and secure access to devices to originate or release print jobs. You can limit access to sensitive data, as well as specific services and settings.

Authentication options are compatible with a wide range of industry-standard secure readers and cards. Choose card, cardless or even mobile device-based authentication with NFC-capable Android™ or iOS devices, or use Xerox® Print Portal and a QR code to find and unlock devices.

For tighter security within a cloud setting, identification can be supplemented with a password entered at the MFP user interface (two-factor identification).

Take control of costs and restrict access to devices/features at the user/group level with essential print rules.

ACCOUNTING AND REPORTING

Administrators can closely monitor printing across the organisation with our consolidated fleet reporting and accounting capability. An at-a-glance dashboard provides rapid insights into print activity and status. The ability to see top users by departments or usage mode helps administrators take control of costs.

EASY MOBILE PRINTING

Xerox® Workplace Cloud makes mobile printing simple and seamless, even with complex network configurations. A truly flexible solution raises productivity for everyone.

- Select your office documents, photos, PDFs and more.
- Find the closest printer and manage your print settings.
- Select and preview your document.
- Securely release your document to print.

Print seamlessly from Microsoft® Windows® OS devices and Google® Chromebooks™, Mac® OS, Linux® and mobile app printing for iOS, Android and Windows Surface® tablets.

With a traditional pull/follow printing workflow, send jobs to a single queue for release and retrieve when ready.
